

CLAIMS

- 1 A method for producing a vaccine containing an
immunogenic determinant, characterised in that it
5 comprises the steps of:
- a) subjecting cells infected with an intra-cellular
bacterial, protozoan or parasitic pathogen to
stress with heat or tumour necrosis factor; and
 - b) extracting the endogenous stress-induced
10 products from the stressed cells; and
 - c) using the extracted products as the immunogenic
determinant in the preparation of the vaccine
composition.
- 15 2. A method as claimed in claim 1, characterised in that
the active ingredient of the immunogenic determinant
consists predominantly of one or more shock
protein/antigenic peptide fragment complexes.
- 20 3. A method as claimed in either of claims 1 or 2,
characterised in that the cells are infected by
bacterial pathogens and the stress applied is heat.
4. A method as claimed in claim 3, characterised in that
25 the heat stress is achieved by heating to from 5 to
8° above the normal temperature of cultivation of the
cells.
5. A method as claimed in claim 1, characterised in that
30 the cells are infected by parasitic pathogens and the
stress is induced by tumour necrosis factor.

6. A method as claimed in any one of the preceding claims, characterised in that the cells have been modified to induce synthesis of stress proteins.
- 5
7. A method as claimed in any of the preceding claims, characterised in that the application of stress to the cells is carried out in vitro.
- 10
8. A method according to claim 1 for producing a vaccine substantially as hereinbefore described in any one of the examples.
- 15
9. A vaccine composition containing an immunogenic determinant, characterised in that the immunogenic determinant comprises one or more complexes between a shock protein and an antigenic peptide fragment derived from the heat or tumour necrosis factor stressing of a cell infected with a bacterial, protozoal or parasitic intra-cellular pathogen.
- 20
10. A vaccine composition containing an immunogenic determinant, characterised in that the immunogenic determinant is produced by a method as claimed in any one of claims 1 to 8.
- 25
11. A vaccine composition as claimed in either of claims 9 or 10, characterised in that the composition also contains an adjuvant for the immunogenic determinant.
- 30
12. A vaccine composition as claimed in any one of claims

9 to 11, characterised in that the composition is an aqueous composition.

13. A vaccine composition according to either of claims 9
5 or 10, substantially as hereinbefore described in any one of the Examples.
14. A method for treating an animal with a vaccine,
characterised in that it comprises administering a
10 pharmaceutically acceptable quantity of a vaccine composition as claimed in any one of claims 9 to 13 sufficient to elicit an immune response in the animal.
- 15 15. A method as claimed in claim 15, characterised in that the vaccine composition is administered by injection.
